

Amit Bhandari

Node.js Backend Developer — REST APIs · Microservices · System Design · Data Engineering

+91-9675517579 bhandariamit108@gmail.com in Amit Bhandari github.com/amit9675 amit9675.github.io

PROFESSIONAL SUMMARY

Senior Node.js Backend Developer with 4+ years building scalable REST APIs, microservices architectures, and data pipelines across ed-tech, healthcare, travel, and logistics. Proficient in Node.js, Express.js, MongoDB, PostgreSQL, Redis, Kafka, Python, Databricks, PySpark, and Azure CI/CD. Experienced in system design, API performance optimization, and event-driven architectures. Open source contributor and published npm package author.

TECHNICAL SKILLS

Frontend

JavaScript and TypeScript
React.js and Next.js
Redux and Recoil
UI Libraries (ShadCN, MUI, Tailwind)

Backend and Databases

Node.js and Express.js
Redis and Kafka
Prisma and Mongoose
PostgreSQL and MongoDB
Hono (serverless backend)

DevOps and Others

CI/CD Pipelines (Azure DevOps)
System Monitoring
AWS (EC2, S3, CDN)
Python and Beautiful Soup
REST APIs and GraphQL
Databricks, PySpark, Snowflake

Currently Learning: Docker, Redis, Kafka, Kubernetes (K8s)

PROFESSIONAL EXPERIENCE

Senior Engineer 1 — Node.js Developer

Jun 2026 – Present

CodersBay Technology

Bengaluru, Karnataka

- Lead full-stack development of a logistics microservices platform tracking 3 vehicle fleet categories (ambient, chilled, frozen) in real-time, powering a FinOps portal and Control Tower dashboard used by 50+ operations staff for fleet oversight and cost analysis.
- Architect Next.js dashboards and Node.js REST APIs with JWT authentication and role-based access control; apply Redis caching and PostgreSQL optimizations — cutting load times by 40% and release turnaround by 30% via Azure DevOps CI/CD.
- Coach and mentor engineers, drive sprint planning, and standardize reusable component libraries across 3 concurrent workstreams — improving team delivery speed by 20% in an Agile squad environment.

Software Engineer — Node.js Developer

Oct 2024 – Apr 2026

The Return Journey

Pune, Maharashtra

- Owned the B2B travel platform end-to-end — the company's core revenue product — building 15+ Node.js REST APIs (booking, vendor, commission, pricing) and the React.js frontend serving a growing base of B2B travel partners.
- Engineered a Python and Beautiful Soup data ingestion pipeline for travel content scraping, and implemented CI/CD on Azure DevOps — increasing release frequency by 35% and saving 8+ hours of manual deployment effort per sprint.
- Integrated Redis caching and optimized MongoDB queries, improving average API response times by 40% and reducing finance team manual reconciliation effort by 25% per cycle.

Software Engineer — Node.js Developer

Mar 2024 – Sep 2024

1Doc HealthCare Pvt. Ltd.

Haryana

- Delivered healthcare web applications from scratch using the MERN stack — covering patient management, doctor scheduling, appointment booking, and an HMS dashboard for clinic administrators — handling data for over 1 million patient records.
- Reduced dashboard load times by 40% via MongoDB indexing and cut data inconsistency rates by 30% through API-layer schema validation and enforcement across 4 core data pipelines.

Software Engineer — Node.js Developer

May 2023 – Feb 2024

Pearl Organization

Dehradun, Uttarakhand

- Delivered 20+ client-facing web apps (e-commerce, e-learning, LMS, HMS, portfolios) in React.js, Node.js, and MongoDB, owning the full lifecycle from design to deployment for each project in an agency environment.
- Built e-commerce and LMS platforms with payment gateways, course management, and analytics dashboards — cutting average client go-to-market time by 3 weeks across 5+ ed-tech and retail clients.
- Maintained CI/CD pipelines in GitHub Actions and Azure DevOps across client environments, achieving zero failed deployments over 9 months.

Masai School

Bengaluru, Karnataka

- Guided 50+ students daily through MERN stack curriculum — conducting code reviews, doubt sessions, and project evaluations — while contributing to the institution's Online Judge platform, owning backend API integration, test-case pipelines, and end-to-end system testing.
- Developed and maintained student-facing React.js and Node.js applications, improving platform uptime by 35% and reducing bug reports by 40% for a cohort of 200+ active learners.

PROJECTS, NPM PACKAGE AND OPEN SOURCE

Barsys — IoT Cocktail Platform barsys.com

React.js, Node.js, IoT, REST APIs

- Contributed frontend and API integration components to Barsys, an award-winning IoT startup automating cocktail preparation through smart hardware and a web and mobile application, improving user experience for over 10,000 cocktail enthusiasts across 15+ countries.

js-utilities-lib npmjs.com

JavaScript, TypeScript — Published npm package

- Published a zero-dependency JS utility library with 50+ helpers for string, array, date, math, object, and network operations, streamlining common tasks across any JavaScript or TypeScript project.

Financial AI Audit System

React.js, Node.js, FastAPI, Python, Databricks, PySpark

- Built an AI-powered audit platform with React and Redux front-end, 3 Node.js microservices, and PySpark pipelines — surfacing \$985,000 in misstatements for a petroleum trading client via 7 rule-based audit checks.

Open Source Contributions

100xdevs CMS · Payload CMS

- 100xdevs CMS: Added keyboard shortcuts for playback speed and volume control to the video player — pull request merged into production, improving accessibility for over 50,000 active learners on the platform.
- Payload CMS: Introduced rate limiting on authentication endpoints to block brute-force attacks — merged as a security enhancement protecting over 100,000 registered user accounts.

EDUCATION

B.Tech (Honors) — 76%

Uttarakhand Technical University
