

Amit Bhandari

Node.js Backend Developer — REST APIs · Microservices · System Design · Data Engineering

+91-9675517579 bhandariamit108@gmail.com in Amit Bhandari github.com/amit9675 amit9675.github.io

PROFESSIONAL SUMMARY

Senior Node.js Backend Developer with 4+ years building scalable REST APIs, microservices architectures, and data pipelines across ed-tech, healthcare, travel, and logistics. Proficient in Node.js, Express.js, MongoDB, PostgreSQL, Redis, Kafka, Python, Databricks, PySpark, and Azure CI/CD. Experienced in system design, API performance optimization, and event-driven architectures. Open source contributor and published npm package author.

TECHNICAL SKILLS

Frontend

JavaScript and TypeScript
React.js and Next.js
Redux and Recoil
UI Libraries (ShadCN, MUI, Tailwind)

Backend and Databases

Node.js and Express.js
Redis and Kafka
Prisma and Mongoose
PostgreSQL and MongoDB
Hono (serverless backend)

DevOps and Others

CI/CD Pipelines (Azure DevOps)
System Monitoring
AWS (EC2, S3, CDN)
Python and BeautifulSoup
REST APIs and GraphQL
Databricks, PySpark, Snowflake

Currently Learning: Docker, Redis, Kafka, Kubernetes (K8s)

PROFESSIONAL EXPERIENCE

Backend Developer

Oct 2024 – May 2026

Vessel Arc

Remote

- Architected and deployed the core B2B travel platform end-to-end, leveraging **React.js**, **Vite**, and **Node.js** to build highly scalable Admin and Client panels for custom-crafted itinerary products.
- Led the **High-Level Design (HLD)** to dismantle a legacy monolith, successfully migrating to an event-driven **Node.js microservices** architecture that boosted system scalability by 200%.
- Engineered resilient **REST APIs** and optimized complex MongoDB queries, aggressively implementing **Redis caching** to slash average API response times by 40%.
- Authored comprehensive **system design documentation** detailing API gateways, database sharding strategies, and strict Scrum compliance, reducing cross-functional onboarding time by 30%.

Software Engineer — Node.js Developer

Mar 2024 – Sep 2024

1Doc HealthCare Pvt. Ltd.

Haryana

- Delivered comprehensive healthcare web applications from scratch using Next.js and Node.js, managing sensitive patient data across secure Admin and Client panels for over 50,000 active users.
- Designed highly responsive UI components in Next.js and optimized MongoDB indexing, reducing dashboard load times by 40% for administrators handling over 1 million patient records.
- Managed robust GitHub Actions CI/CD pipelines and enforced API-layer schema validation to cut data inconsistencies by 30%.

Software Engineer — Node.js Developer

May 2023 – Feb 2024

Pearl Organization

Dehradun, Uttarakhand

- Launched 20+ client-facing web applications—including LMS, CRM systems, e-commerce platforms, and portfolios—owning the full lifecycle in a fast-paced service provider environment.
- Utilized Node.js intensively to build backend services, leveraging robust libraries (Express, Mongoose, Multer) to build scalable, flexible B2B and B2C solutions.
- Oversaw CI/CD pipelines via GitHub Actions across varied client environments, automating deployments and cutting average client go-to-market time by 3 weeks.

FREELANCE EXPERIENCE

Backend Developer

Jun 2026 – Present

CodersBay Technology

Bengaluru, Karnataka

- Spearhead full-stack development for delivery partner applications (web and mobile), architecting scalable backend microservices using Node.js and Express Gateway to support over 10,000 daily deliveries.

- Led backend development initiatives and drove Agile sprint planning, providing technical guidance to engineers while orchestrating strict CI/CD pipelines via GitHub Actions, accelerating release cycles by 25%.
- Optimize database operations and API performance, cutting data load times for delivery tracking by 40% and significantly accelerating the release lifecycle.

PROJECTS, NPM PACKAGE AND OPEN SOURCE

js-utilities-lib npmjs.com

JavaScript, TypeScript — Released npm package

- Released a zero-dependency JS utility library with 50+ helpers for string, array, date, math, object, and network operations, streamlining common tasks across any JavaScript or TypeScript project.

Open Source Contributions

100xdevs CMS · Payload CMS

- 100xdevs CMS: Added keyboard shortcuts for playback speed and volume control to the video player — pull request merged into production, improving accessibility for over 50,000 active learners on the platform.
- Payload CMS: Introduced rate limiting on authentication endpoints to block brute-force attacks — merged as a security enhancement protecting over 100,000 registered user accounts.

EDUCATION

B.Tech (Honors) — 76%

Uttarakhand Technical University
